"""NARPY SURFACTANT-ASSOCIATED PROTEIN
       MCCROGGANISMS. STRONGLY MALTOSE RESIDUES AND TO A LESSER EXTENT OTHER ALPHA-GLUCOSYL MOIETIES. IT COULD PARTICIPATE IN THE EXTRACELLULAR REORGANIZATION OR TURNOVER OF PULMONARY SURFACTANT.

-!- SUBUNIT: OLIGOMERIC COMPLEX OF 4 SET OF HOMOTRIMERS.

-!- SUBCELLULAR LOCATION: EXTRACANT CONSISTS OF 90% LIPID AND 10% MISCELLANDENOUS: PULMONARY SURFACTANT CONSISTS OF 90% LIPID AND 10% PROTEIN. THERE ARE 4 SURFACTANT ASSOCIATED PROTEIN: 2 COLLAGENOUS, CARBOHYDRATE-BINDING GLYCOPROTEINS (SP-A AND SP-D) AND 2 SWALL HYDOPHOBIEL PROTEINS (SP-A AND SP-D) AND 2 SWALL SYMPROPHOBIEL PROTEINS (SP-B AND SP-C).

-!- SIMILARITY: CONTAINS 1 C-TYPE LECTIN FAMILY DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Young N.M., Leon M.A.;
Young Learbolydrate specificity of conglutinin and its homology to proteins in the hepatic lectin family.";
Blochem. Blophys. Res. Commun. 143:645-651(1987).
-!- FUNCTION: CALCIUM-DEPENDENT LECTIN-LIKE PROTEIN WHICH BINDS TO A YEAST CELL MALL EXTRACT & IMMUNE COMPLEXES THROUGH THE COMPLEMENT COMPONENT (CBIL). IT IS CAPABLE OF BINDING NONREDUCING TERMINAL N-ACETYLGIUCOSAMINE, MANNOSE, AND FUCOSE RESIDUES.
-!- SUBBUIT: OLIGOMERIC COMPLEX OF 4 SET OF HOMOTRIMERS.
-!- SIMILARITY: CONTAINS A COLLAGENOUS DOMAIN.

PREDOMINANTLY IN THE ROUGH ENDOPLASMIC RETICULUM AND IN THE GOLGI
APPARATUS, AND LITTLE OR NO MBP IS PRESENT IN PLASMA MEMBRANES AND
LYSOSOMES. THE MBP IS EXCLUSIVELY LOCALIZED IN THE CISTERNAL SPACE
OF THE ORGANELLES, PROBABLY AS A LOOSELY BOUND MEMBRANE PROTEIN.
SIMILARITY: CONTAINS A COLLAGENOUS DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     X-RAY CRYSTALLOGRAPHY (2.3 ANGSTROMS) OF 124-238.

                                                                                                                                                                                                                                                                                                   TISSUE ANTIGORY 13:184-188(1994).

-!- FUNCTION: IDENTIFIES CYTOTOXIC/SUPPRESSOR T-CELLS THAT INTERACT
WITH MHC CLASS I BEARING TARGETS. CD8 IS THOUGHT TO PLAY A ROLE IN
THE PROCESS OF T-CELL MEDIATED KILLING. CD8 ALPHA CHAINS BINDS TO
CLASS I MHC MOLECULES ALPHA-3 DOMAINS.
-!- SUBMINT: IN GENERAL HETERODIMER OF AN ALPHA AND A BETA CHAIN
LINKED BY TWO DISULFIDE BONDS. CAN ALSO FORMS HOMODIMERS.
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY.
-!- SIMILARITY: CONTAINS I IMMUNOGLOBULIN-LIKE V-TYPE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         InterPro; IPR003006; Ig_MHC.

J. Woll Blol. 286:817-817(1999).

FUNCTION: MAJOR SECRETED PROTEASE OF MAST CELLS WITH SUSPECTED PROFES IN VASOACTIVE PEPTIDE GENERATION, EXTRACELLULAR MATRIX BEGRADATION, AND REGULATION OF GLAND SECRETION.

CATALYTIC ACTIVITY: SPECIFICITY SIMILAR TO CHYMOTRYPSIN.

SUBCELLULAR LOCATION: MAST CELLG RANLIES.

TISSUE SPECIFICITY: MAST CELLG RANLIES.

TISSUE SPECIFICITY: MAST CELLS IN LONG, HEART, SKIN, AND PLACENTA...

TISSUE SPECIFICITY: MAST CELLS IN LONG, HEART, SKIN, AND PLACENTA...
                                                                                                                                                                                                                                                                                                                "Purification and molecular cloning of chymase from human tonsils."; FEBS Lett. 323:119-122(1993).

"Angiotensian-converting enzyme: zinc- and inhibitor-binding stoichiometries of the somatic and testis isozymes.";

stoichiometries of the somatic and testis isozymes.";

elochemistry 30:7118-126(1991).

-!- FUNCTION: CONVERTS ANGIOTENSIN I TO ANGIOTENSIN II BY RELEASE OF THE TERMINAL HIS-LEU, THIS RESULTS IN AN INCREASE OF THE VASOCONSTRICTOR ACTIVITY OF ANGIOTENSIN.
-!- CATALYTIC ACTIVITY: Release of a C-terminal dipeptide, oligopetide-!-Xaa-Xbb, when Xaa is not Pro, and Xbb is neither Asp nor Glu. Converts angiotensin I to angiotensin II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ANGIOTENSIN-CONVERTING ENZYME, SOMATIC

             INTERACTIONS BETWEEN T-CELLS AND DENDRITIC CELLS.
SUBCELLULAR LOCATION: Type I membrane protein (Potential).
TISSUE SPECIFICITY: UBIQUITOUS EXPRESSION WITH HIGH LEVELS IN
TRABECULAR BONE, THYMUS, SMALL INTESTINE, LUNG, BRAIN AND KIDNEY.
WEAKLY EXPRESSED IN SPLEEN AND BONE MARROW.
SIMILARITY: CONTAINS 4 TNFR-CYS REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Multiple cadherins are expressed in human fibroblasts.";

Blochem. Blophys. Res. Commun. 235:355-358(1997).

-I- FUNCTION: Calcium-dependent cell-adhesion protein (Potential).

-I- SUBCELLULAR LOCATION: Type I membrane protein (By similarity).

-I- TISSUE SPECIFICITY: Fibroblast specific.

-I- SIMILARITY: CONTAINS 27 CADHERIN DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo sapiens (Human).

Anikeeva N.N., Vinogradova T.V., Votoshin O.N.;
Submitted (DEC-1989) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: PRODUCED BY T--CELLS IN RESPONSE TO ANTIGENIC OR
MITOGENIC STIMULATION, THIS PROTEIN IS REQUIRED FOR T-CELL
PROLIFESATION AND OTHER ACTIVITIES CRUCIAL TO REGULATION OF THE
IMMUNE RESPONSE. CAN STIMULATE B CELLS, MONOCYTES, LYMPHOKINE-
ACTIVATED KILLER CELLS, NATURAL KILLER CELLS, AND GLIOMA CELLS.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: BELONGS TO THE IL-2 FAMILY.

                                                  CYTOXINE 7:223-231(1995).
-!- FUNCTION: PRODUCED BY T-CELLS IN RESPONSE TO ANTIGENIC OR MITOGENIC STIMULATION, THIS PROTEIN IS REQUIRED FOR T-CELL PROLIFERATION AND OTHER ACTIVITIES CRUCIAL TO REGULATION OF THE IMMUNE RESPONSE. CAN STIMULATE B CELLS, MONOCYTES, LYMPHOKINE-ACTIVATED KILLER CELLS, NAUDRAL KILLER CELLS, AND GLIOMA CELLS.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: BELONGS TO THE IL-2 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     O-LINKED (GALNAC. . .) Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
